

Groen's New PureSteemSM Water Treatment System

BETTER WATER. BETTER PERFORMANCE. BETTER COOKING.

It's a fact of nature that water contains minerals. Inside steamers and combination ovens, these minerals can build up in the steam generator or boiler. This creates a number of problems including: Increased energy use. Clogged drain valves. Slower and uneven cook cycles. Reduced steam flow. Increased equipment downtime. Higher service and repair costs. More frequent deliming and maintenance.

A Groen PureSteem Water Treatment System prevents these problems from becoming serious ones. And in most cases, with proper maintenance and filter changes, they can be eliminated.

The PureSteem system keeps minerals from forming harmful deposits. This allows them to drain out of the steam generator or boiler when the unit is shut off.

This means Groen's PureSteem Water Treatment System will: Help prevent expensive steam generators or boilers from breaking down. Allow steamers and combination ovens to perform better. Prevent harmful scale build-up. Lower maintenance costs. And reduce downtime.

If you purchase the PureSteem system together with a new Groen steamer or combination oven, you'll get an extended warranty, up to two years, on the new steam generator or boiler.

Groen's PureSteem Water Treatment System uses a specially-designed blend and cartridge system, made exclusively for Groen, that can process an astonishingly large volume of water – up to 20,000 gallons. So you can reduce the number of times you need to change the filters.

If you don't remember when you need to change the filters, don't worry. Groen's customer service team will call and remind you. It's just part of our comprehensive customer service program. When you get a Groen PureSteem Water Treatment System, you get our name on it. And we stand behind our name. That gives you peace of mind, knowing you're backed by a Groen-quality product.
