

“The Randell FX Series refrigeration system has brought efficiency into our kitchen with energy-savings and food safety.”

When the SEPIA kitchen was designed, there was one goal in mind...efficiency. The Randell FX Series provided the refrigeration solution that SEPIA Chef Kendal Duque was looking for. By including four FX units into the chef table, the Randell FX Series capabilities as a refrigerator or freezer offer the flexibility to accommodate their ever-changing menu selections. Because the cold stays with the product and the design eliminates the pour-out effect, the FX Series provides superior temperature consistency using less energy than traditional designs. In addition, the food products remain at the proper temperature, eliminating food loss and maintaining freshness.

*Kendal Duque, Chef De Cuisine
SEPIA, Chicago, Illinois*

The Randell FX Series is the most revolutionary, energy-efficient, flexible, food-safe refrigeration system...EVER! Providing greater refrigeration control than ever before, the Randell FX Series offers a revolutionary design that eliminates the pour-out effect and keeps the cold with the food. Ensuring consistent temperatures with precision control, the FX promotes food quality, food safety, and energy efficiency under the most extreme kitchen conditions. No matter how many times it's opened, the insulated insert keeps cold air where it belongs – with the food! For ever-changing menus, try the FX 4-N-1; offering refrigeration, freezer, rapid-chill and safety-thawing capabilities in one energy-saving design. Pick any temperature between -5° and 40°F for exact product requirements, or use the rapid-chill or safety-thaw for up to 20 lbs of on-demand product. For even greater flexibility, integrate an FX unit into your chef table!
