RANDELL EXPANDS FX SERIES™ PRODUCT OFFERING TO INCLUDE LO-HEIGHT MODEL

Jackson, Miss. (February 8, 2008) – Unified Brands is pleased to announce the expansion of the Randell FX Series product offering by introducing the Lo-Height FX, a lower profile design allowing foodservice operators the opportunity to utilize FX technology in locations where space is a premium. The new design, available in both the 2-N-1 and 4-N-1 models, stands at a height of 14.8", a shorter height difference of 1.3" than the original FX Series units.

The Randell FX Series with FlexiCold Technology is a point-of-use refrigeration system in which each unit can operate as a refrigerator, freezer, quick chiller or safety thaw unit, with a switch of a button. Offered in a platform of one-, two-, three- or four-refrigerated units with standard configurations including: FX-1 Refrigerated Drawer, FX-1CS Cook-Top System, FX-2CS Cook-Top System, FX-2WS Preparation Work-Top System, FX-3SS Precision Storage System and Two FX-2WS Preparation Work-Top System for four drawers of storage space. The internationally patented technology provides individual units with 100 percent cooling within each insulated insert, keeping temperatures precise and conserving energy no matter how many times a drawer is opened and closed. Because the cold remains in the insert, food remains refrigerated and safe from dangerous bacteria and cross contamination.

-MORE-

“The new Lo-Height FX, “A-Series”, offers all of the benefits of FX, just in a smaller package,” said Art DeLorenzo, Randell product line director. “By expanding the product offering to include the lower profile design we have increased the solutions that FX can provide to foodservice operators. The Lo-Height FX is perfect for applications such as sliding under custom fabricated counters, millwork front counters or below salad bars. Essentially, we have taken one of the most flexible pieces of equipment in the foodservice industry and made it even more flexible.”

The Lo-Height FX is available in any combination of units and can also be combined with the original height units if desired. A standard Lo-Height FX stands at a 14.8” height, a two-stack version of Lo-Height units stands at 34” A.F.F. on casters or at 36” with taller casters.

The Randell FX Series was recognized as a 2007 Kitchen Innovations Award winner selected by the National Restaurant Association. For more information on the Randell FX Series visit www.randellfx.com.

Unified Brands and its Groen, Randell and Avtec product lines have leading industry positions in cooking equipment, cook-chill production systems, custom fabrication, foodservice refrigeration, ventilation and air handling systems.
